

I would like to show my opposition to the efforts of the NAB's petition 04-160 limiting local programming on satellite radio. I pay for my subscription with the provider and I should have the right to pick and choose which programs and content that I listen to. Local content would only add additional choices and provide me with a better value for my purchasing dollar. If I could get the quality and content currently provided on my satellite radio in a terrestrial station, I would be less likely to subscribe to the services of the satellite provider; obviously, this is not the case and I subscribe for the value and content that I receive.
